## Review

"This is an interesting book and a great way to start teaching kids about our Solar System. The illustrations are well done and make teaching about each planet easier than a photograph. The explanations of each planet are not long so the the book can be read in one night, which I find desirable." ~Barb

"Planets are simply the most awe-inspiring, wondrous entities besides the human body and don't need any embellishment. " ~Alison

"Great for homeschooling!!"

"My granddaughter loved this book!! She loves learning about the planet's so I couldn't pass up this book, she looks thru the pages again an again to see her favorite planets !!"

Planets Are Beautiful

By June Barnwell

The cover was awesome. And so were the pictures inside. Planets are simply the most awe-inspiring, wondrous entities besides the human body and don't need any embellishment. Because they are so amazing, and not tangible to us, they are concepts that can be hard to grasp. Most of us are essentially relying on trust that they a) exist and b) are as wonderful as scientists say they are. This book provided a grounded, factual overview of the main properties of the most "famous" planets in our solar system - perfect for an elementary school aged child. There was no muss or fuss. It wasn't overly complicated like so many books on the planets are. And yet it managed to convey the scale and capability of our solar system. In fact, I learned a few things. :-)

Great for beginner Astronomers :)

By Maliha Khan

It is a cute little book and the amount of information is just right for a young child who is starting to learn about our universe. I like the fact that the pictures included are real images of the actual planets and not fake cartoony images to give children a more realistic look. They are sure to remember what a planet looks like if they ever encountered a real life picture of it in any real life or academic setting. My son loves everything about planets and he has enjoyed reading this book very much.

Why I Chose "A Look at our Solar System"

By nelirosi

I chose this book for my granddaughter Cris, who is in 2nd grade. We read together and I try to find books that she can read to me herself and at the same time learn something new. I haven't kept up to date with information about the solar system and thought this would be a good subject for us to share. It was simple enough for her to understand and retain the information given, without being bored with too much technical jargon. We enjoyed it very much
